

Amcn Exam pattern, Summer 2024,

①

Summer
2024

1. BPSK / QPSK / rare Robustness
(Draw plot)
2. Draw Reverse Tunneling & Describe.

3. Advantages of centralized Mac Schema?
4. Energy Saving in 802.11, Awake Sleep.
how works when data is available to transfer.
5. PCF how works?
6. TCP how ensures reliability?
7. Can TCP detect Congestions?
8. QoS Attributes?
9. Multipath propagation?
10. Tradeoff between latency & reliability?
11. Why is difficult to ~~test~~ ^{SO} systems?
12. Two principles & Mechanism to apply "SO"?
13. TDD suits for what type of traffic & why?

14. Underlay ^{acceptable resources} & Overlay ^{unused spectrum holes} (2 Questions) ?

(2)
Summer
2024

15. PREQ, PREP Request ?

16. Idea of Geographical Routing Algorithm ?
(Greedy Approach ?)

17. Describe a challenge of sharing spectrum overlay ? if it can detect primary users ?
Draw Diagram ?

18. Describe Diagram ?

19. SDR's challenges ?

20. TCP Congestion window ?

21. MACA (Multi Access Collision Avoidance) ?
(Random VS Reserved) ^{in distributed systems}
^{Adhoc & Sensor Networks}
^{peer to peer wireless communication}

22. Multipath IP Problem ?

23. TCP - handle Dupacks & time out ?

24. ^{purpose of} sliding window protocol in TCP.

To control the flow of data & ensures the sender doesn't overwhelm the receiver, it allows multiple packets to be sent before waiting for Ack, ^{improves} throughput & efficiency.
