

Underlay

AMCN, winter 2025

- How can capacity increased in interference limited system when the affected network bandwidth is fixed
ans → increasing transmit power
- How TCP ensures reliability?
- 2 example of SO and mechanism they use?
- Cognitive Radio characteristic?
- tradeoff b/w latency & reliability?
- which behavior of SO makes it difficult to res?
- MIMO Diversity? (Several receivers & senders) or one signal?
- BPSK & QPSK difference in data rate & error?
- Draw diagram of errors for QPSK?
- Ad-hoc RREQ & RREP explanation the process?
- greedy Geographical how works?
- Advantage of cooperative detection strategies of Spectrum Sensing in cognitive Radio?
- Idea of SDR?
- MACA (RTS/CTS) How solves problem?

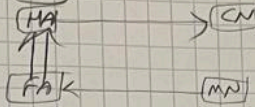

- Idea for energy saving in 802.11?

• - pcf ?

- Revers tunneling → Draw Revers from MN to CN?

Identify tunneling path?

- Multipath propagation?

- TDD suits for what type of traffic? why?
and what type of IP traffic? ans. sporadic

- DHCP?

- TCP ports?

- reuse 3 vs reuse 7?

- trick of CDMA to avoid collision?

• - exponential Backoff?
